

d.3: The strategic information platform in SAP environments

Integrate your SAP System with d.3 and realise Enterprise Content Management. With the certified interface d.link for SAP R/3 d.3 makes it possible for you to access all vouchers and documents to customers, business partners, projects, business transactions and products independently whether they were created in SAP R/3 or in other applications. With the call for a certain order in SAP R/3, d.3 now gives you the automatic access on all documents of the order folder of this certain order. Independently whether it concerns a SAP voucher, a technical drawing, a letter out of Word, an email etc. You can visualize all documents at the screen. The revision-safe archiving of these documents is independently guaranteed. Also outside of the SAP environment you have access to all documents.

Integrate your SAP System with d.3 and realise Enterprise Content Management. With the certified interface d.link for SAP R/3 d.3 makes it possible for you to access all vouchers and documents

Enterprise wide all necessary documents and information are available electronically at each time and at each workstation.

Communication between d.3 and SAP R/3 is made by the standardized SAP ArchiveLink interface and the d.link component of the d.3 system. The integration of the d.3 system into the SAP R/3-System is examined and certified by SAP. Different SAP modules from FI, SD, MM, PP, CO, HR... up to the SAP R/3-PDM/PLM-System are optimally supported by d.3. It supports the different SAP archiving and document management scenarios along the entire logistic procedure chain in accordance with the specifications of the SAP Business Workflow. The d.3 system is an open standard system, which can be used both in connection with SAP R/3, and with other Business applications, like Office components, CAD/CAM systems, FAX solutions, Mail systems, SCAN procedure,

d.3 makes thus comprehensive integration procedures available for the enterprise-wide logic combination of different procedures and applications.

Conversion of SAP proprietary formats into Long-term-stable standard formats

- automatic conversion of defined outgoing vouchers into standardized, long-term-stable raster data (Multi-Page TIFF)

Forms management / conversion of form and data for outgoing vouchers

- converting/overlay of all outgoing documents with appropriate forms
- flexible document-kind-referred (voucher-referred) allocation of forms
- flexible allocation of forms by page
- flexible, language code controlled allocation of forms
- archiving of the prepared documents – no further forms management necessary

d.Link for SAP R/3

Archiving in accordance with SAP ArchiveLink convention

- automatic linkage of the archived documents with the respective SAP business process
- archiving of incoming vouchers like delivery notes, purchase invoices, correspondence, contracts...
- archiving of outgoing vouchers such as offers, confirmation of orders, delivery notes, calculations, orders, Office documents...
- archiving of printing lists
- archiving of reorganisation data
- economical and failsafe archiving on optical media
- support of HTTP content server interface (starting from R/3 release 4,5)

d.velop

Archiving in self-sufficient archives

- archiving in SAP independent archives
- archiving of Non SAP data, like correspondence, technical documents, contracts...
- logical summary of SAP and Non-SAP information within an archive solution
- automatic later indexing of the archived SAP vouchers over extensive SAP functional modules
- search possibility with SAP R/3-procedures directly from the SAP R/3 application
- search possibility independently from SAP R/3 with extended document index
- search possibility over self-sufficient d.3 web Client

Archiving in distributed archives

- mandator-referred archiving in independent archives
- query possibility for all corporations
- cumulative query procedure over distributed archives

Virtual file formation

- structured voucher archiving in virtual files
- flexible definition of document plant conditions

e.g. definition of kinds of document, which start files automatically

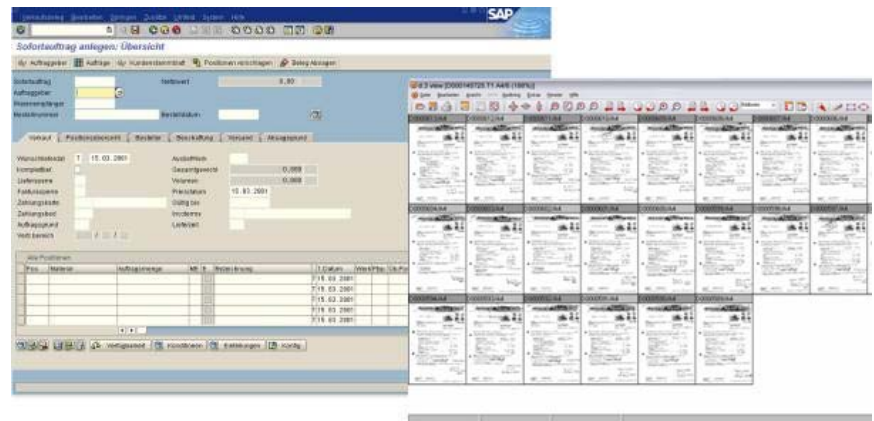

- automatic multiple file allocation e.g. An order is assigned to the order procedure folder and the supplier folder
- logical summary of SAP and NON SAP information within an archives solution
- File formation over distributed Archive. An order is triggered and archived in the work A, the delivery note arrives in work B and is archived there. The information is provided with to all authorized users completely in accordance with the rights structure over the file.

Archiving of documents without SAP reference

- All business-relevant documents of an enterprise, independent of format or application, can be archived accordingly and are available

High performance visualisation with d.3 view

- catalog display of all documents retrieved
- display of documents in the multi-Page TIF format
- all pages of a document with one view
- display functions: zooming, zooming out, rotate, measure, navigation overview, print functions, stamp functions, annotation functions, hyperlinks...
- viewing of folders with unlimited number of pages
- Viewing of folders and documents up to formats larger than DIN A0

Ill. 1: With d.3 view effective working with the SAP R/3 system becomes possible.

d.Link for SAP R/3

Support of all SAP archiving scenarios

- early seizing
- simultaneous seizing
- late capture without bar code
- late capture with bar code
- support SAP Business Workflow
