

d.3 — From Groupware to a strategic information platform

Enterprise Content Management starts with application integration. Extend the possibilities and the efficiency of your Lotus Notes applications and realise a strategic information platform in your enterprise. With the d.velop d.link for lotus notes interface you have access to all documents to customers, business partners, projects, business transactions and products, independently in which system they were created. Use the possibilities of the flexible folder structures, for the file of an unlimited number of documents and the functionalities of a leading all in one solution for digital archiving, for Document- and Workflowmanagement as well as for Knowledge and Content management. All this from the Lotus Notes surface. The revision-safe archiving of the documents is naturally guaranteed. Also outside of the Lotus Notes environment you have access to all documents.

Enterprise Content Management starts with application integration. Extend the possibilities and the efficiency of your Lotus Notes applications and realise a strategic information platform in your enterprise. With the d.velop d.link for lotus notes interface you have access to all documents.

Increase the efficiency of your Lotus Notes system with d.3

How is the configuration done?

The configuration of the Lotus Notes interface is made by d.3 admin. Various data bases (not only the Mail data base) can be configured.

The connection of Lotus Notes masks to the d.3 kinds of document takes place through the Notes internal attribute fields and the Repository fields of d.3

How can documents be archived?

Lotus Notes documents can be archived by push of a button by the connection of the Notes masks with the kinds of document automatically.

By agents documents can be imported at a certain time automatically to d.3

Manual archiving, the import Client can be started from Notes and thus the Notes documents can be filed interactively.

How are documents investigated?

Documents archived in d.3 can directly be investigated out of Notes or about the d.3 explorer.

Which additional features are contained?

E-Mail archival

E-Mails can be archived simply and fast. It is selectable whether with or without Attachments and/or only the pure email. Receivers and transmitter information as well as date and line for reference text are used automatically for the indexation.
